ENTER DISPLAY FORMAT (BIB):d

'D' IS NOT A VALID FORMAT FOR FILE 'CONFSCI'

The following are valid formats:

The default display format is BIB.

ALL ---- AN, DN, TI, AU, CS, SO, DT, FS, LA, CC, CT

BIB ---- AN, DN, TI, AU, CS, SO, DT, FS, LA

CBIB --- CBIB

IALL --- AN, DN, TI, AU, CS, SO, DT, FS, LA, CC, CT

IBIB --- AN, DN, TI, AU, CS, SO, DT, FS, LA

IND ---- CC, CT

SAM ---- TI, CC, CT

SCAN --- TI, CC, CT (random display without answer numbers)

HIT ---- All fields containing hit terms

KWIC --- All hit terms plus 20 words on either side

OCC ---- List of display fields containing hit terms

Hit terms will be highlighted in all displayable fields except PY.

To display a particular field or fields, enter the display field codes. For a list of display field codes, enter 'HELP DFIELDS' at an arrow prompt (=>). Examples of formats include: 'BIB'; 'AB'; 'SO,ST'. You may specify the format fields in any order, and the information will be displayed in the same order as the format specification.

The same formats (except for HIT, KWIC, OCC, and SCAN) may be used with the DISPLAY ACC command to display the record for a specified Accession Number.

AB Water pollution is emerging as a major global problem as the world's fresh
water supplies become progressively contaminated. Mercury is a one of the
major **toxicants** present in waste water but other heavy metal
ions as well as herbicides and insecticides contribute to the problem.
Current methods for detecting these **toxicants** are complex
(usually laboratory based), slow and expensive. Here we report a
relatively inexpensive, portable and quick method for detecting heavy
metal ions and other **toxicants** using a fluorescent probe bound
to DNA. Concentrations of **toxicants** at or above the maximum
levels permitted by EPA authorities dissociate the DNA from its ligand
which is observed as a loss of fluorescence from the sample. We compare
this method with two established methods based on a submitochondrial
particle assay and with a bioassay using a freshwater organism (C dubia).
Given the diversity of the three assays, they exhibit remarkably
comparable results.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention identifies nucleic acids that are differentially expressed in cells exposed to various toxicants, including a common group whose expression is modulated by toxicants that act by differing mechanisms. The nucleic acids so identified and their corresponding protein products have utility as markers for specific and general cytotoxic responses. Utilizing the identified nucleic acids, the invention further provides screening methods to identify and characterize toxicants, screens for identifying antidotes to particular toxicants and diagnostic methods for detecting toxic responses. The identified nucleic acids and their corresponding gene products also serve as targets for various therapeutics designed to alleviate toxic responses.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates generally to an assay for the detection of toxicants. More particularly, the present invention contemplates an assay of toxicants such as those of the type comprising heavy metal, heavy metal divalent cations and organic molecules as well as organo-halides. Such toxicants are frequently present as contaminants in aquatic and terrestrial environments. The present invention further provides an assay device for detecting toxicants. The present invention is predicated in part on the sensitivity of binding partner affinity to the toxicants.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
